Aquatech Launches MoVap™ the Gas Shale Wastewater Mobile Evaporator Unit

CANONSBURG, Pa., December 2009 – Aquatech launched MoVap™ a mobile evaporator system at a private luncheon jointly organized by the Washington County, Washington County Chamber of Commerce and Aquatech. The theme of the luncheon was “Bringing businesses together and solving local problems locally”.

The MoVap™ unit is a solution specifically designed for the growing frac and produced waste water treatment needs of the Marcellus Gas Shale region, which includes the Washington County. The MoVap™ unit is designed to reduce the volume of high total dissolved solids laden waste waters from the gas well frac operation directly at the well head. The advantages of the carrying out the operation are recovery of waste for reuse and reduction of waste discharge.

The versatility of the MoVap™ design and its mobility allow the unit to be effective in other oil and gas shale regions such as Barnett, Haynesville, Fayetteville, and Antrim. For more information on MoVap™ please email producedwater@aquatech.com.

About Aquatech

Aquatech is a global leader in water purification technology for industrial and infrastructure markets with a focus on desalination, water reuse, and zero liquid discharge. The company is headquartered in the United States, has offices throughout North America, and significant presence worldwide through subsidiaries in Europe, the Middle East, India, and China.

Aquatech strives to provide Technology Leadership and Performance Excellence to the Global Water Industry and aims to support its clients with cutting edge Sustainable Solutions, minimizing their Life Cycle Cost, as well as their Carbon and Water Footprint.
